Friend --

The State of Hawai'i has been a prominent example for our nation when it comes to climate change and renewable energy. Governor Ige has been leading the charge for the U.S. Climate Alliance, a group of Governors committed to fighting climate change and demanding an end to President Trump's atrocious environmental policies and budget cuts that would negatively impact our country and the world.

While implementing innovative renewable energy initiatives, Governor Ige has also sought economic opportunities to fight the devastating effects of climate change by creating more jobs.

Recently, construction began on three different solar farms on the Island of O'ahu to improve the future of Hawai'i. The solar panels will produce enough clean energy to power 32,000 Oahu homes and drastically reduce the carbon footprint by up to 90,000 metric tons. The substantial energy cost savings will allow investments in koa and 'ōhi'a tree restoration projects which will offset their carbon emissions. Not only will this enhance the environment around us, but it will stimulate economic growth and increase the well-being of the people of Hawai'i.
